README.md

Code for "Federated Nearest Neighbor Classification with a Colony of Fruit-Flies"

Table of contents:

- Setting up environment
  - Prerequisites
  - Installing requirements
- Running experiments
  - Running experiments on hyper-parameter dependence
  - Running comparison to baselines with synthetic data
  - Running comparison to baselines with OpenML data
  - Scaling with number of parties
  - Differential privacy effect

Setting up environment

This section details the setup of the compute environment for executing the provided scripts.

Prerequisites

- `python3.8`
- `pip`
- `virtualenv`
